

## NETWORK ANALYSIS

### *Snap shot*

Before making an offer, we can visit your client in order to make a short analysis of the network. The electricity invoice can be a great help (peak performance, capacitive and inductive power, useful hours, ... ), but a more profound view in function of possible harmonics is important. So such a sample gives us a better idea of this situation.

### WHAT IS MEASURED ?

- Tension (AC/DC)
- Current (oscillation, RMS)
- THDI% (total of the harmonics)
- H3, H5, H7, ... , H25
- tri-phase power
- power factor
- minimum, maximum and average values
- smooth function (rounded values)

When you have a project where a small analysis is welcome, this service is included.
